

# RTE (Realtime Transaction Environment for TradExpress ©Generix)

- unofficial cheat table -

<b>Process control</b>	<b>Basic types</b>
<b>background(tCommand,taArgs, tStdin,tStdout, tStderr)</b>	e data element
<b>exec(tCommand, tArg1, ..., tArgN)</b>	g group symbol
<b>exit(nextCode)</b>	m message variable
<b>spawn(tOriginal,tRemoved,tReplacements)</b>	mMESSAGE, mVERSION
<b>system(tCommandLine)</b>	mRELEASE, mAGENCY
<b>Text handling</b>	c static counter
<b>build(pirnt lists)</b>	s environment variable
<b>compare(tObject,tWildcard)</b>	o command line option
<b>index(tOriginal, tSearch)</b>	p parameter
<b>length(tText)</b>	f file
<b>number(tNumText)</b>	t text variable
<b>peel(tOriginal, tExtras)</b>	n numeric variable
<b>replace(tOriginal,tRemoved,tReplacements)</b>	b boolean variable
<b>split(tSource, taArray,tSeparator/regularexpression)</b>	ta an array containing text items
<b>strip(tOriginal, tExtras)</b>	na an array containing numeric items
<b>substr(tOriginal,nPosition, nLength))</b>	ba an array containing boolean items
<b>toupper(tOriginal)</b>	tf function returning text
<b>tolower(tOriginal)</b>	nf function returning a number
	bf function returning a boolean value
<b>File handling</b>	<b>Special parameters</b>
<b>close(tFile)</b>	_PARAMFILE_
<b>copy(tSource,tDestination)</b>	_FILE_
<b>link(tOriginal, tLink)</b>	_INDEX_
<b>redirect(stream, tFile)</b>	
<b>rename(tOldname,tNewname)</b>	
<b>Output</b>	<b>Key words</b>
<b>debug(print lists)</b>	ARGC, ARGV
<b>edierrorlist(MESSAGE SEGMENT)</b>	EOL, EOT
<b>edierrordump(MESSAGE SEGMENT)</b>	NL
<b>flush([taMatrix], nMin,nMax, tLinesep)</b>	INPUT, OUTPUT, LOGGING
<b>log(print lists)</b>	AND, OR, NOT
<b>print(print lits)</b>	FALSE, TRUE
<b>put([taMatrix,] nLine,nPos, print item)</b>	EMPTY
<b>Input</b>	RETURN
<b>load([nMode,] tSrcFile,taArray [,tMultisep[,tSeparator]])</b>	MESSAGE, SEGMENT, GROUP,
<b>pick(nLine, nPosition,nLength)</b>	LINE
<b>read(tFile)</b>	BULDING, RECEIVING
<b>Time</b>	<b>Break, continue, next statements</b>
<b>time([TIME] [,tFormat])</b>	BREAK, CONTINUE, NEXT, NEXTMESSAGE
<b>Database access</b>	<b>File attributes (fFile.ATTRIBUT)</b>
<b>find(tDatabase, filter)</b>	EXIST
<b>new( tDatabase)</b>	NAME, PATH, FULLNAME
	OWNER, GROUP
	SIZE, LINES
	ATIME, MTIME, CTIME
	READ, WRITE, EXEC
	TYPE, CONTENT
<b>Multi purpose</b>	<b>Boolean expression</b>
<b>remove(tFile/[ARRAY])</b>	5 > nVar
<b>valid(MESSAGE SEGMENT)</b>	12.43 < nVar
	15 <= nVar
	50 >= nVar
	«test» <> tVar
	bVar = TRUE
	not taVarTab[1] = tVar
<b>Segment look-ahead</b>	
<b>bfPeekSegment(text array, [group/occurrence.spec.], name, number)</b>	

Control statement	Command line
<b>if</b> boolean expression <b>then</b> ! <b>else</b> ! <b>endif</b>	<b>logadd</b> <b>logchange</b> <b>logcreate</b> <b>logremove</b> <b>logview</b> <b>Istool</b> function -s sysname [-f sysname.cfg] [-L fieldlist] [-I headerlines] [-q] [-v] [-N] Function : build, reconfig, relabel, convert check, salvage, fix, pack, fixhints, orderfree, rmunref dump, modified, created, fileds, status liste, insert, delete, change
